DATE MAILED: 09/14/2005				

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/684,867	Applicant(s) GUERIN, FREDERIC	
	Examiner Vickey Ronesi	Art Unit 1714	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 July 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-9 are now pending in the application.
2. The objections to the specification and claims and 35 USC 112(2) rejections are withdrawn in light of applicant's amendment filed 7/20/2005.
3. The 35 USC 102 rejection over Fuji (WO 97/36956) and the 35 USC 102 and 103 rejections with Musch (US 5,187,232) and Aonuma (US 5,432,226) are withdrawn.
4. Applicant's statements of common ownership at the time of invention for both U.S. Applications No. 10/728,029 and 10/648,601 are acknowledged (pages 12 and 13 of amendment filed 7/20/2005). Thus, any rejection under 35 USC 103(a) based on 35 USC 102(f) or (g) is precluded.
5. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior office action.
6. The new grounds of rejection set forth below are necessitated by applicant's amendment filed 7/20/2005. In particular, claims 1 and 6 have been amended to be further limited with a polydispersity of less than 2.7. Thus, the following action is properly made final.

Claim Rejections - 35 USC § 112

7. Claims 5-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1714

With respect to claim 5, there is no antecedent basis for the term “The process” and should therefore read as “A process”. Moreover, the term “a polymer composite” in line 1 has antecedent basis in claim 1 and should read as “the polymer composite”.

With respect to claims 6 and 7, there is no antecedent basis for the term “The process” and should therefore read as “A process”.

Claim Rejections - 35 USC § 102/103

8. Claims 1, 2, and 4-7 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Oyama et al (US 5,651,995).

Oyama et al discloses vulcanization rubber composition comprising a nitrile group-containing copolymer rubber having a Mooney viscosity of 15-200 (col. 3, line 64) and a Mw/Mn ratio of 2.3-5.5 (col. 4, lines 17-24); sulfur or peroxide vulcanizing systems (col. 12, line 61 to col. 13, line 46); and fillers (col. 13, lines 47-53)—wherein the composition is injection molded (col. 2, line 40; col. 36, lines 64-65) to make articles such as gasket, seals, belts, etc (col. 33, lines 16-38).

In light of the above, it is clear that Oyama et al anticipates the presently cited claims.

To the extent that Oyama et al does not exemplify a composition with the presently claimed Mooney viscosity and polydispersity, it is considered that it would have been obvious to one of ordinary skill in the art to utilize any of the Mooney viscosity or polydispersity values taught by Oyama et al, there be no showing of unexpected or surprising results regarding these ranges, and thereby arrive at the presently cited claims.

Art Unit: 1714

Claim Rejections - 35 USC § 103

9. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujii (WO 97/36956).

It is noted that the international Patent Application WO publication is being utilized for date purposes. However, since WO 97/36956 is in Japanese, in the discussion below, the US equivalent for WO 97/36956, namely US 6,489,385, is referred to in the body of the rejection below. All column and line citations are to the US equivalent.

Fujii discloses a composition comprising a nitrile group-containing nitrile rubber (col. 2, line 35 to col. 3, line 10) having a Mooney viscosity ranging from 5 to 135 (col. 2, lines 1-2) with a polydispersity (Mw/Mn) of 3-5 (col. 5, lines 17-20) and various other components such as a vulcanizing agents (col. 6, line 61 to col. 7, line 37), fillers (col. 6, lines 52-58), and fibers (col. 11, lines 34-54). The composition is combined to form composites (col. 29, lines 34-36).

While Fujii discloses a polydispersity of 3-5 and not the presently claimed polydispersity of less than 2.7, it is the examiner's position that the values are close enough that one of ordinary skill in the art would have expected the same properties. Case law holds that a *prima facie* case of obviousness exists where the claimed ranges and prior art ranges do not overlap but are close enough that one skilled in the art would have expected them to have the same properties.

Titanium Metals Corp. of America v. Banner, 778 F.2d 775, 227 USPQ 773 (Fed. Cir. 1985).

Moreover, Should applicant argue criticality of the presently claimed range of less than 2.7, it will be noted that applicants' data in Table 2 cannot establish criticality for the polydispersity given that the comparison involves both viscosity and polydispersity. Since no appropriate side-by-side example is given, such comparative data has little or no probative value.

Art Unit: 1714

10. Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujii (WO 97/36956) in view of Graefe (US 5,002,475).

The discussion with respect to Fujii in paragraph 9 above is incorporated here by reference.

Fujii does not disclose that an injection molding process is utilized, nevertheless, it discloses that the composition is useful in making belts (col. 11, lines 52-53; col. 29, lines 44-46).

Graefe discloses a reaction (i.e., liquid) injection molding (RIM) apparatus and teaches that RIM apparatus and processes are very useful in manufacturing shaped articles from thermosetting resins such as transmission belts and conveyor belts (col. 1, lines 37-48).

Given that Fujii discloses that its composition is suitable for articles such as belts and given the teachings by Graefe regarding the usefulness of RIM to form belts from thermosetting resins, it would have been obvious to one of ordinary skill in the art to utilize RIM processes to form a belt utilizing Fujii's composition and thereby arrive at the presently cited claims.

11. Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujii (WO 97/36956) in view of Graefe (US 5,002,475).

The rejection is adequately set forth in paragraph 7 of Office action mailed 2/2/2005 and is incorporated here by reference.

Double Patenting

12. Since the following obviousness-type double patenting rejections are to copending applications and it not being evident which of the copending applications will become allowable first, applicant's statement regarding the deferment of filing a terminal disclaimer or applicable arguments is acknowledged.

Two obviousness-type double patenting rejections are set forth below.

Double Patenting, I

13. Claims 1-9 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 12-14, 16, and 7 of copending Application No. 10/728,029. Although the conflicting claims are not identical, they are not patentably distinct from each other because of the reasons given below.

US Appl. '029 discloses a composite and a process for the manufacture of a shaped article wherein the Mooney viscosity from 30-50. Although the Mooney viscosities of US Appl. '029 do not overlap the presently claimed range of below 30, it is the examiner's position that the values are close enough that one of ordinary skill in the art would have expected the same properties. Case law holds that a *prima facie* case of obviousness exists where the claimed ranges and prior art ranges do not overlap but are close enough that one skilled in the art would have expected them to have the same properties. *Titanium Metals Corp. of America v. Banner*, 778 F.2d 775, 227 USPQ 773 (Fed. Cir. 1985). Should applicant argue criticality of Mooney viscosity less than 30, it will be noted that applicants' data in Table 3 on page 20 compares polymers of Mooney viscosity 6.5 and Mooney viscosity 70. Since 70 is very distant from US

Art Unit: 1714

'029's 30, such comparative data has little or no probative value. With respect to the polydispersity, note page 3, line 10 where a polydispersity of less than 2.6 is disclosed. Case law holds that those portions of the specification which provide support for the patent claims may also be examined and considered when addressing the issue of whether a claim in an application defines an obvious variation of an invention claimed in the patent. *In re Vogel*, 422 F.2d 438, 164 USPQ 619,622 (CCPA 1970).

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Double Patenting, II

14. Claims 1-9 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-7 of copending Application No.10/684,601. Although the conflicting claims are not identical, they are not patentably distinct from each other because of the reasons given below.

US Appl. '601 discloses a composite and a process for the manufacture of a shaped article wherein the Mooney viscosity from 30-50 and the polydispersity is less than 2.7. Although the Mooney viscosities of US Appl. '601 do not overlap the presently claimed range of below 30, it is the examiner's position that the values are close enough that one of ordinary skill in the art would have expected the same properties. Case law holds that a *prima facie* case of obviousness exists where the claimed ranges and prior art ranges do not overlap but are close enough that one skilled in the art would have expected them to have the same properties.

Titanium Metals Corp. of America v. Banner, 778 F.2d 775, 227 USPQ 773 (Fed. Cir. 1985).

Art Unit: 1714

Should applicant argue criticality of Mooney viscosity less than 30, it will be noted that applicants' data in Table 3 on page 20 compares polymers of Mooney viscosity 6.5 and Mooney viscosity 70. Since 70 is very distant from US '029's 30, such comparative data has little or no probative value.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

15. Applicant's arguments filed 7/20/2005 have been fully considered but they are not persuasive. Specifically, applicant argues that applicant's invention contains a low Mooney optionally hydrogenated polymer prepared via a metathesis reaction in the presence of a metathesis catalyst.

In response to applicant's argument, it is noted that the features upon which applicant relies (i.e., polymer prepared via a metathesis reaction in the presence of a metathesis catalyst) is not recited in the rejected claims. Case law holds that while the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Conclusion

16. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Contact Information

17. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vickey Ronesi whose telephone number is (571) 272-2701. The examiner can normally be reached on Monday - Friday, 8:30 a.m. - 5:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on (571) 272-1119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
